

EVOLT 360 BODY SCAN REPORT

JORDAN ELLIS

5 September 2026

AGE

36

HEIGHT

175 cm

WEIGHT

85.0 kg

PREVIOUS SCAN

13 June 2026

Current training. Two small-group strength classes and one PT session per week, plus a Saturday parkrun.

Twelve weeks in, Jordan has dropped 3.4 kg and almost all of it is fat. Muscle mass has held and even crept up, which is exactly the pattern we want.

BODY COMPOSITION

WEIGHT

85.0 kg

▼ 3.4 kg

LEAN BODY MASS

58.6 kg

NORMAL ▲ 0.5 kg

SKELETAL MUSCLE MASS

31.6 kg

NORMAL ▲ 0.4 kg

BODY FAT MASS

26.4 kg

HIGH ▼ 3.9 kg

BODY FAT

31.1 %

HIGH ▼ 3.2 %

Body fat mass is down 3.9 kg while lean mass is up half a kilo. The scale says 3.4 kg, but the change in body composition is bigger than that number suggests.

Body fat percentage is still in the high range, so the priority stays the same: keep losing fat while holding on to muscle.

VISCERAL FAT **KEY FOCUS AREA**

VISCERAL FAT LEVEL

9

HIGH ▼ 2

VISCERAL FAT MASS

3.2 kg

▼ 0.7 kg

VISCERAL FAT AREA

109 cm²

HIGH ▼ 19 cm²

ABDOMINAL CIRCUMFERENCE

97.0 cm

▼ 4.5 cm

WAIST-TO-HIP RATIO

0.92

HIGH ▼ 0.02

This is the key health marker to keep working on. Visceral fat sits around the abdominal organs and is linked to higher cardiometabolic risk, so it matters more than the number on the scale.

It is moving the right way: the visceral fat area is down 19 cm² and the waist is down 4.5 cm.

MUSCLE DISTRIBUTION

LEAN MASS BY SEGMENT

Jordan is well balanced left to right and upper to lower body. The small side-to-side differences are normal.

Every segment gained a little lean mass, which shows the strength work is doing its job during the calorie deficit.

METABOLISM & ENERGY

Treat the estimated TEE as a starting point, not an exact requirement.

The recommended 1,950–2,050 kcal/day, with plenty of protein, has been working. We will keep it there and adjust based on progress, hunger and recovery.

PROGRESS SINCE 13 JUNE 2026

MEASURE	PREVIOUS	THIS SCAN	CHANGE
Weight	88.4 kg	85.0 kg	▼ 3.4 kg
Lean body mass	58.1 kg	58.6 kg	▲ 0.5 kg
Skeletal muscle mass	31.2 kg	31.6 kg	▲ 0.4 kg
Body fat mass	30.3 kg	26.4 kg	▼ 3.9 kg
Body fat	34.3 %	31.1 %	▼ 3.2 %
Visceral fat level	11	9	▼ 2
Visceral fat mass	3.9 kg	3.2 kg	▼ 0.7 kg
Visceral fat area	128 cm ²	109 cm ²	▼ 19 cm ²
Abdominal circumference	101.5 cm	97.0 cm	▼ 4.5 cm

MEASURE	PREVIOUS	THIS SCAN	CHANGE
Waist-to-hip ratio	0.94	0.92	▼ 0.02
BMR	1,720 kcal/day	1,735 kcal/day	▲ 15 kcal/day
Estimated TEE	2,660 kcal/day	2,690 kcal/day	▲ 30 kcal/day
Bio age	41 yrs	38 yrs	▼ 3 yrs
BWI score	5.6 /10	6.4 /10	▲ 0.8 /10
Left arm lean mass	3.02 kg	3.08 kg	▲ 0.06 kg
Right arm lean mass	3.10 kg	3.15 kg	▲ 0.05 kg
Torso lean mass	24.60 kg	24.80 kg	▲ 0.20 kg
Left leg lean mass	8.95 kg	9.05 kg	▲ 0.10 kg
Right leg lean mass	9.12 kg	9.20 kg	▲ 0.08 kg

COACH'S INTERPRETATION

This is a great first block. Most people who lose weight this fast give up some muscle along the way. Jordan hasn't, because training stayed consistent.

For the next 12 weeks the focus is:

- Keep both strength classes and the PT session every week
- Protein at every meal
- Build daily steps up towards 9,000

NEXT TARGET

By the next scan, aim for **body fat below 29%** and a **visceral fat level of 8 or lower**, with skeletal muscle held at 31.5 kg or above.

That would mean roughly another 2–3 kg of fat loss. We judge it on the scan, not the scale.
